Heart Bypass Surgery Cost in India 2026: A Complete Guide for International Patients

If a cardiologist has told you that you need a coronary artery bypass graft (CABG), the diagnosis is stressful enough without staring down a bill that could run into six figures. For patients in the US, UK, and Gulf, that's exactly the situation many face — which is why a growing number are choosing to have the same surgery done in India, at JCI- and NABH-accredited hospitals, for a fraction of the cost.

This guide breaks down what heart bypass surgery actually costs in India, how that compares internationally, and what's included in a typical treatment package.

What Does Heart Bypass Surgery Cost in India?

A standard coronary artery bypass graft (CABG) in India typically costs **between \$5,000 and \$8,500** at a JCI/NABH-accredited hospital, including the surgeon's fee, anesthesia, ICU stay, ward recovery, and standard post-op medication. More complex cases — multiple grafts, additional valve work, or extended ICU time — can push the package toward \$10,000–\$12,000.

Compare that to:

Country	Typical CABG Cost (self-pay, private)
India	\$5,000 – \$8,500
United Kingdom (private)	£20,000 – £44,000 (~\$25,000 – \$55,000)
United States	\$90,000 – \$150,000+
UAE / Gulf (private)	\$30,000 – \$50,000+

That's a savings of **70–90%**, even after factoring in flights, accommodation, and a companion's travel — and it's why India performs tens of thousands of cardiac procedures for international patients every year.

Why Is It So Much Cheaper — Without Being Lower Quality?

The honest answer is volume and cost structure, not corner-cutting. India's top cardiac centers perform high numbers of bypass surgeries every year, and high-volume surgical teams tend to be more consistent, not less skilled. Combine that with lower hospital operating costs, lower (but still highly trained) surgeon and staff compensation relative to the US/UK, and centralized procurement of devices and consumables, and the price gap becomes easier to understand.

Most hospitals partnered with international patient programs are **JCI and/or NABH accredited**, meaning they follow internationally recognized protocols for safety, infection control, and clinical governance — the same standard used for blood screening (NAT testing) and ICU staffing ratios that you'd expect in the UK or US.

What's Usually Included in the Package?

A typical bypass surgery package quoted to international patients includes:

- Pre-operative tests (ECG, angiography, blood work, chest X-ray)
- Surgeon, anesthesiologist, and surgical team fees
- 1–2 days in cardiac ICU
- 4–6 days in a private or semi-private ward room
- Standard post-operative medication
- One follow-up consultation before discharge

Not usually included (worth budgeting separately): flights, visa fees, accommodation before/after the hospital stay, a companion's costs, and any complications requiring extended ICU time.

What Drives the Final Quote Up or Down?

- **Number of grafts** — single vs. double, triple, or quadruple bypass
- **Surgical technique** — conventional open-chest CABG vs. minimally invasive or robotic-assisted (more advanced techniques can cost more but often mean shorter hospital stays)
- **Off-pump vs. on-pump surgery** — many Indian centers now perform a majority of bypasses "off-pump" (without stopping the heart), which can support faster recovery
- **Additional procedures** — e.g., a valve repair alongside the bypass
- **Hospital tier and city** — metro hospitals can price slightly higher than equally accredited centers in smaller cities

This is exactly why a generic number you see online should be treated as a starting point, not a quote — your real cost is confirmed only after a cardiologist reviews your actual angiography and reports.

Recovery Timeline for International Patients

Most patients should plan for **7–10 days in hospital** and **2–4 weeks total in India** before flying home, to allow for wound healing and a final cardiologist sign-off. Your surgeon will issue a "fit to fly" certificate once it's safe to travel — for bypass and valve surgery this is typically after the 3–4 week mark, given the cabin-pressure and DVT-risk considerations of long flights.

How Heal India Medi Tourism Coordinates Your Treatment

We're not a hospital — we're your concierge for the entire journey, which is exactly where most patients get stuck when arranging cardiac care abroad on their own:

1. **Send your reports on WhatsApp** — angiography, ECG, and any specialist notes.
2. **Receive a written treatment plan and cost estimate within 24 hours**, reviewed against options across our partner hospital network — not locked into a single hospital's pricing.
3. **Visa support** — we help you prepare the hospital invitation letter your medical visa application requires.
4. **Airport pickup, accommodation, and a translator if needed**, for you and an accompanying family member.
5. **Post-discharge follow-up** after you return home, coordinated with your local doctor where possible.

Frequently Asked Questions

Is heart bypass surgery in India safe for international patients?

Yes, when performed at JCI/NABH-accredited hospitals. These hospitals follow internationally benchmarked protocols for infection control, blood safety, and ICU care.

How much can I realistically save?

Most patients save 70–90% compared to private treatment in the US, UK, or UAE, even after travel and accommodation costs.

How soon can surgery be scheduled after I arrive?

Once your reports are reviewed and your treatment plan is confirmed, scheduling is typically much faster than waiting lists in the UK or Canada — often within days of arrival, subject to your cardiologist's assessment.

Will my international insurance cover treatment in India?

Some insurers offer reimbursement for treatment abroad; this depends entirely on your policy and provider. We can help prepare documentation your insurer may request, but coverage itself is between you and your insurer.
